

ARTICLES, PHOTOS, AND VIDEOS ABOUT RESEARCH PROJECTS FROM THE TEXAS A&M RESEARCH ENTERPRISE—*on a single website*

As one of the world's leading research institutions, Texas A&M University is at the forefront in making significant contributions to scholarship and discovery. Texas A&M ranked in the top twenty of the National Science Foundation's Higher Education Research and Development survey, based on expenditures of more than \$922 million in fiscal year 2018.

Texas A&M's research creates new knowledge that provides basic, fundamental, and applied contributions resulting in economic benefits and improved quality of life for the citizens of the state, nation, and world. By showcasing newly created stories about the results of that research, this website seeks to present concepts and products that will inform, inspire, and amaze.

Research @ Texas A&M does not pretend to serve as a comprehensive representation of all research at Texas A&M—a virtually impossible task. Rather, it captures and delivers newly developed narratives by University-affiliated campuses, colleges, divisions, units, and agencies that demonstrate research advances, impacts, and successes. Maintained by Research Communications and Public Relations for the Division of Research, the website also serves as a venue for highlighting research priorities and for showcasing, where possible, the University's research capabilities.
