Texas A&M University’s Global Health Research Complex (GHRC) is a state-of-the-art, nationally distinct research facility and core laboratory serving as a system-wide resource to combat emerging infectious disease threats.

**GHRC Enables Research on High Impact Diseases of Critical Importance to Animal and Human Health**

- **Addresses** those diseases that pose the gravest threat to Texas public health and to its $100 billion agricultural economy.
- **Develops** vaccine countermeasures, diagnostic assays, and rapid pen-side detection technologies.
- **Bridges** a critical gap in global health addressing diseases that infect the human population as well as the agricultural food supply.
- **Provides** new and innovative methods for monitoring, detecting and preventing disease.
- **Improves** human and animal health within Texas, across the United States, and around the globe.
- **Advances** multidisciplinary large animal and insect vector research, education, and training opportunities for faculty at Texas A&M and their partners from other academic institutions and industry.
